

Maaz Ishaq Ademu

Work Experience

Full-Stack Web & Mobile developer at Rama Dreams | Remote (United Kingdom)

(8/2022 – Currently working here)

Mobile Application

- Developed a mobile application for Rama Dreams, facilitating job seekers in finding their ideal roles and enabling employers to recruit the most suitable candidates for their open positions.
- Collaborated within a team of developers to craft mobile applications tailored for startups and business owners, aimed at amplifying their business operations and growth.

Web Application

- Created a web application tailored for startups/companies seeking skilled professionals, as well as for individuals in pursuit of remote positions or overseas job sponsorships.
- Constructed numerous websites for various startups, empowering them to achieve their objectives and present their services with enhanced representation.

Mobile developer at Pyramid Finance | Hybrid (Nigeria)

(1/2022 – 03/2022)

Mobile Application

- At Pyramid Finance, I collaborated with a team of senior developers to create a fintech mobile application catering to consumers and addressing the requirements of investors.

Side Project (Personal)

(Actively working and creating more application)

Mobile Application

- Created an application that consolidates a diverse array of potent AI tools, accessible at your fingertips. Whether you're a student, a professional, or merely intrigued by artificial intelligence, this app is crafted to equip you with state-of-the-art AI functionalities, empowering you to explore its full potential.
- Currently engaged in the development of a shopping application aimed at expediting the shopping experience for users, ensuring swift and seamless transactions without unnecessary delays.

Skills

React

- Creating a web application/website utilizing React along with other powerful tools such as Tailwind CSS, Next.js, Bootstrap, and more to enhance functionality and design aesthetics.

React Native

- In the process of building a cross-platform mobile application using React Native, enabling seamless deployment across various operating systems while leveraging the efficiency and flexibility of the React framework.

Node/Express.js

- Creating a server-side (backend) application using Express.js, a minimalist and flexible web application framework for Node.js, known for its robust features and ease of use in handling HTTP requests and responses.

Database

- Utilizing MongoDB and SQL for managing user data in the backend application

Git & Github

- Leveraging Git and GitHub for collaborative project management and version control.

Education

University of the people (Online)

- Computer Science
